

A Company & Product Overview

Learn more about how we are redefining responsible outdoor drainage

The Drain Company – Stockholm grew from a simple innovation to solve a common problem.

The original goal was to create something that would provide drainage for rainwater on sealed surfaces that does not require extensive works or a large financial cost to resolve.

Since then it has become so much more, with the realisation that the solution could provide so many with a genuine fix that they could implement by themselves, whilst having a positive impact on the environment.

Our brand is made up of two dedicated owners and a number of highly professional partner companies, which are ready to deliver our unique innovation – Stack Drains.

Frederick Håkansson

Who are we?

Our drive to innovate
is guided by 4 key principles:

*Environmental
plus*

*Keep it
simple*

*Cost
effective*

*Easy
to use*

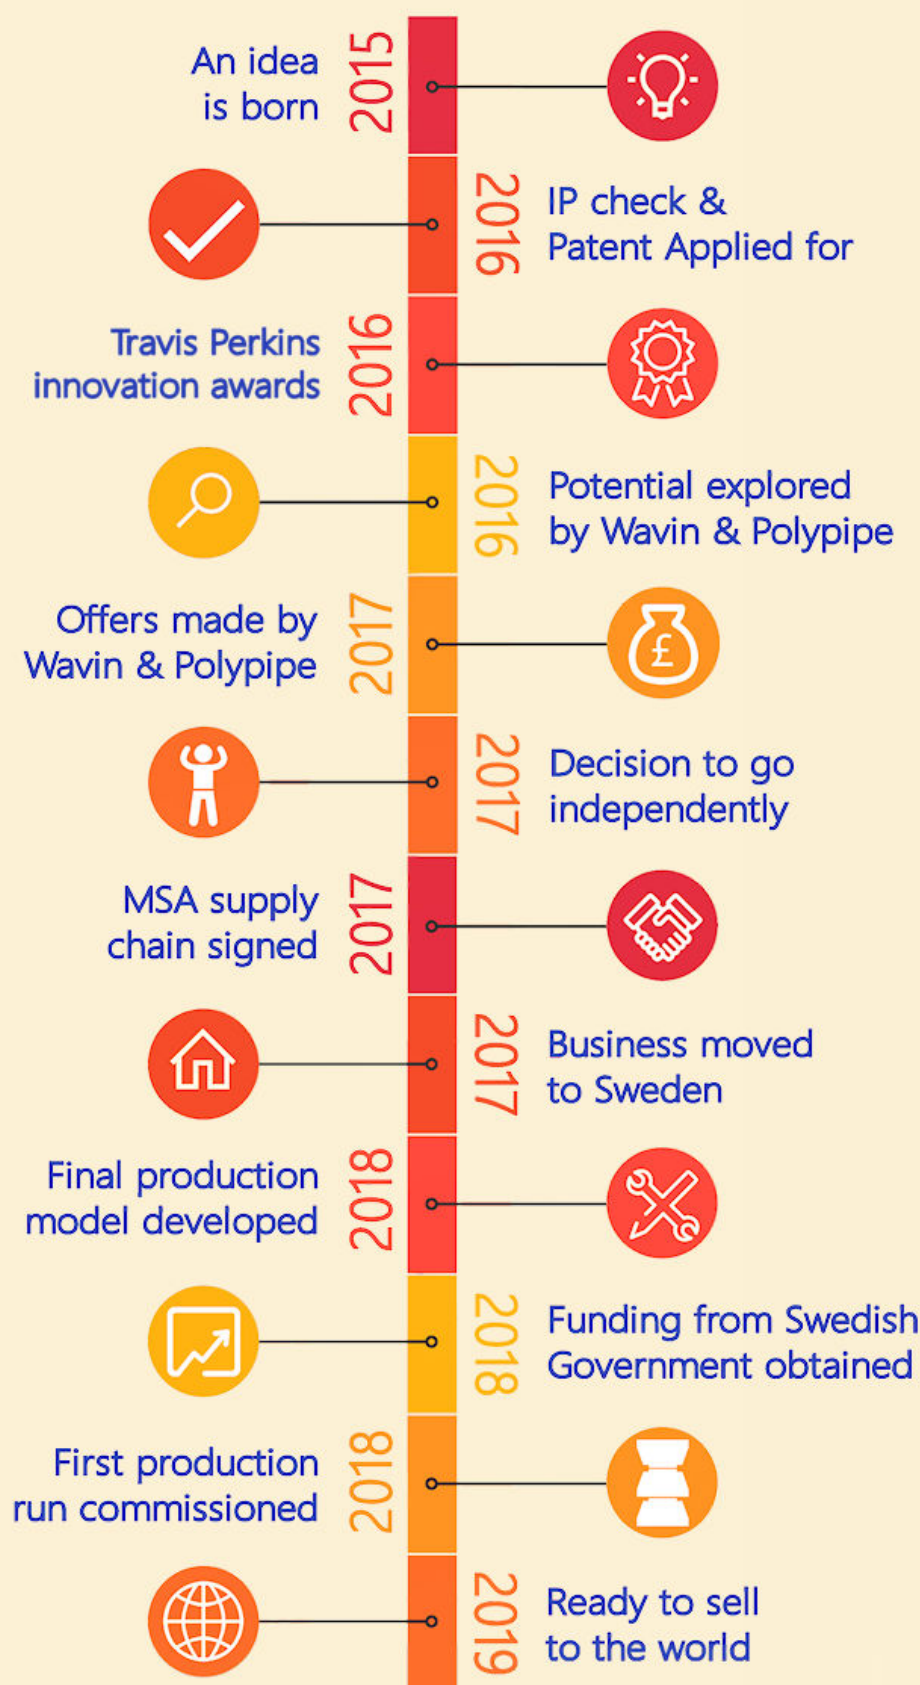

What defines us?

These principles are core to who we are and how we will always work. We not only expect them from ourselves but hope to find them in companies we partner with to deliver our products.

A Timeline of The Drain Company - Stockholm

From then until now

At The Drain Company we only trust the best to help us deliver our products to the world

UK based - business
& IP advisers

Supply Chain Managment
for China & Hong Kong

Swedish Government
funding & advisers

Web development &
online presence drivers

Shipping for UK, EU, US &
all other major countries

Who do we trust?

Collected rainwater on sealed surfaces with no drainage

- What we know

The surface of populated areas is being capped off with concrete, asphalt and paving; meaning that rainwater often collects in unwanted areas.

- What goes wrong

The solution implemented is often to divert rainwater into overworked storm drains or be forced to collect in areas which then become unusable.

- What would be great

A system that would allow rainwater to penetrate into the surrounding subsoil where it is meant to be, that does not require extensive works or cost.

Stack Drains - a proven solution that does not break the bank or your back

Friendly to the environment

Made from just two parts

The most cost effective solution to date

Simple to install, no fixings or sealants

Know the solution

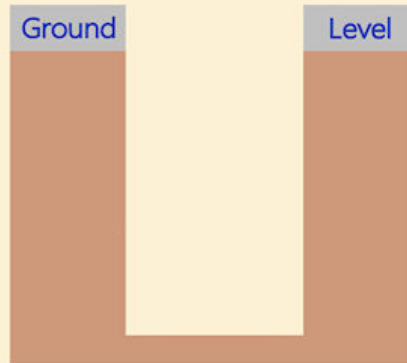

Installation of a simple solution - The Stack Drain Kit

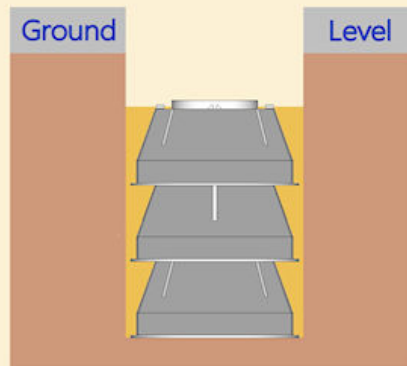

How simple is simple?

Step
1

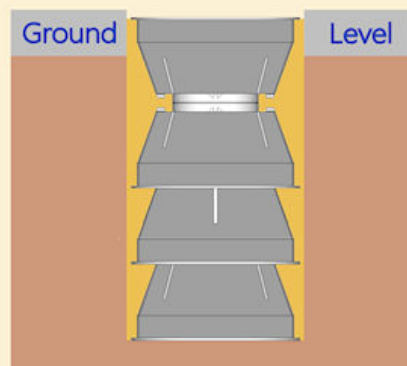

Dig vertical shaft
where needed

Step
2

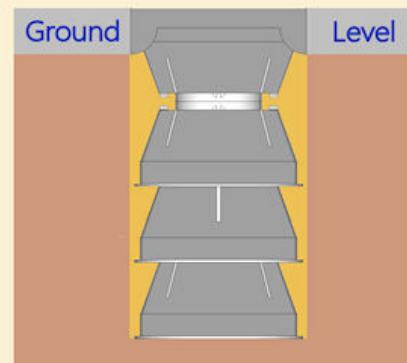

Stack & pack
cones with sand

Step
3

Invert last cone
& pack with sand

Step
4

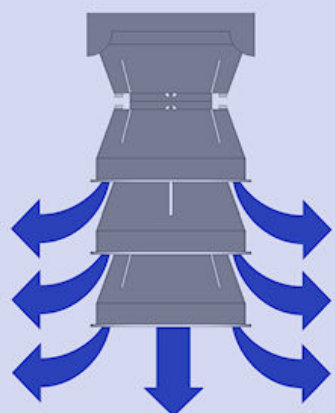

Cap stack with
drainage plate

Features of the Stack Drain Kit & its components

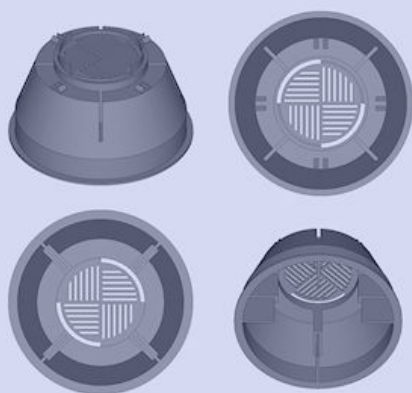

Stack Drain - Kit

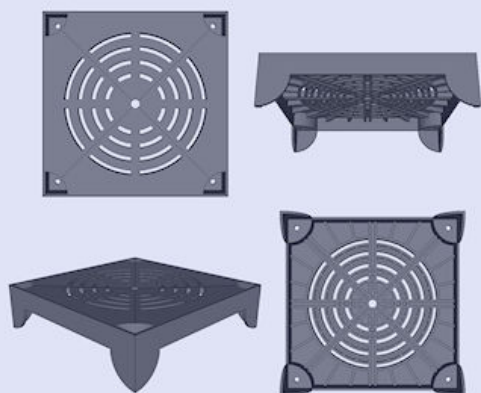

- Maximum drainage potential
- Variable stacking heights
- Easy install for any skill level
- Durable: Industry standard material
- Building regulations compliant
- No fixings or sealants required

Stack Drain - Cone

- Patented stack cone system
- Built-in filter to reduce detritus
- Easy removal for maintenance
- Compatible with pipe size 110mm
- Stackable at full or half height
- Dual Use: Water drainage & funnelling

Stack Drain - Plate

- Built in finger grips for removal
- Compatible with other drainage pipes
- Reinforced design
- Impact resistant
- Extended corners for better insertion
- Inclined surface to improve drainage

More than just a cone!

The environment is important to us, but how are we doing are part with Stack Drains?

- Reduced land subsidence
- Improved land hydration
- Nontoxic materials

- Zero rainwater diversion to sewage & storm drain systems
- Reduced flooding of public areas

- Packaging sourced responsibly
- No unnecessary packaging
- All materials recyclable
